

EFS102/2 Spinal Splint with Flotation

The EFS102 is an extrication spinal fixation. Intended for careful immobilization and fixation of the spine in the extrication and transport of injured persons.

The removeable flotation insert, allows for the transport of a casualty from water. The flotation insert fits to the spinal with velcro strips.

Two straps complete with Velcro fasteners for head fixation. Three straps of various colours with clasps (tridents) for body trunk fixation in the pectoral and abdominal areas. Two hip straps with clasps for fixation in the hip area for transport of the injured person in vertical position.
