CUSTOMER REVIEW:

"Love this saddle. Plenty of loops for all of my tree stuff. Comfy. Fairly light. Well made. Been getting the Ergo since 1st gen."

-Nicholas B.

ErgoPro Saddle-Harness Combo 17905H4

From fall arrest, to fall restraint, to work positioning, Buckingham's ErgoPro tree saddle and harness covers it all. This saddle-harness combination is rated for Fall Arrest so it can be used for fall protection in a bucket truck. This combo is ideal for those who like to transition from the bucket to the tree all while keeping you in compliance with OSHA standards.

The Ergo Pro was designed to fit a range of climbing styles and motions and is one of our lightest saddles available. The harness weighs less than 1lb., making the whole unit come in around 8lbs. Other features, like an elastic keeper placed over the dee-ring to keep the ring flat to the back and out of the way while working in a tree, makes this saddle-harness combo

extremely versatile and one of the most well-thought-out products on the market.

The Ergo Pro meets ASTM F887 standard. Available in Small, Medium, Large, & X-Large. To order the harness separately, which fits all ErgoPro & Ergovation series saddles, please use Buckingham part number REH4.
