

OX BLOCK™ W/BUCK PIN

Pin is easy to remove, but stays in place until intentionally removed.

OX BLOCK™ w/Buck Pin 50063

The Buck Pin was designed as a means to quickly and easily change back and forth between Buckingham approved slings and/or hardware when using the OX BLOCK™ with a shackle top.

Buck Pin 223892R

Pin is easy to remove making changing out configurations in the field a breeze. Also available as a retro.

Buck Pin 223892R

The Buck Pin was designed as a means to quickly and easily change back and forth between Buckingham approved slings and/or hardware when using the OX BLOCK™ with a shackle top. The pin is easy to remove with something as simple as a flat head screw driver and then easy to add back, making changing out configurations in the field a breeze. This new variation of the OX BLOCK™ can be purchased using PN **50063**.

Buck Pin Features Include:

- Weighs only 2.1 oz.
- Zinc plated to protect against corrosion.
- 2.4in in length.
- Tensile tested in the Ox clevis to our 10,000 lbf MBS for the Ox Block™

***Helpful Hint: If you want to attach something to the clevis while wearing insulated gloves, you could leave the pin engaged in only one hole so that the clevis is open before you put the gloves on. Then you can push it closed easily while wearing the gloves. The pin can be removed with a screwdriver while wearing the gloves, but it is much easier without them.*
