

RADIO HARNESS

A longtime and proven favorite of fire departments, our Radio Harness carries a standard size, hand-held radio on the user's chest. This position protects the radio from impact and weather. There's no need to remove the radio from the harness; just squeeze and talk. It works under parkas, rain gear, or turnouts. The radio pocket uses the same design as our ProSeries model and fits a wide range of radio sizes. Our unique design holds the harness tight to your body, keeping the radio in place no matter what you are doing. The mesh panel breathes for additional comfort. Color: Black.
