

REDI-LINE[™] THROWLINE

An excellent choice for shore-based responders, this cost-effective polypropylene line features hollow-braid construction, which makes it easy to handle and stuff into throw bags. Its red/white stripe is highly visible in or out of the water. With life-safety equipment this reasonably priced, you can afford to have a throwline in every patrol car, municipal truck or fire apparatus.

Rope is sold by the foot. Please contact customer support for maximum length available.

Throwlines: A Safe Choice

A throwline bag is the safest way to reach a subject in fast-moving or still water. It provides a downstream safety backup when rescuers must enter the water. Throwline bags should be kept in patrol cars, ambulances, and other emergency response vehicles.
