

SEACREWSADER 290N 3D sMRT

SOLAS APPROVED TWIN CHAMBER LIFEJACKET ↓

Designed for personnel operating offshore, the bespoke version of the established Seacrewsader 290N 3D has been developed alongside Marine Rescue Technologies (MRT) to accommodate the Sea Marshall AU9 and sMRT AU10 Personal Locator Beacons (PLB).

The bladder for this lifejacket positions both inflation mechanisms on one side to comfortably accommodate the sMRT PLB on the other. This, combined with the ergonomic Fusion 3D cover, results in a balanced and symmetrical profile to improve overall constant-wear comfort - leaving your workforce unhindered to move, work and perform.

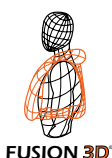

Inspection zips have also been incorporated to each side of the lifejacket - allowing the sMRT PLB to be turned on/off and the inflation mechanisms to be checked without entirely opening the lifejacket. This allows personnel to take ownership of inspecting their inflation mechanisms before donning the lifejacket, to ensure the unit is action ready.

FEATURES

- INSPECTION ZIPS FOR sMRT BEACON AND INFLATION MECHANISM ACCESS
- UNIQUE BLADDER DISTRIBUTION FOR CONSTANT WEAR COMFORT AND IN-WATER PERFORMANCE
- MODULAR COVER SYSTEM - COVERS CAN BE REPLACED IF DAMAGED
- FOAM PADDED COVER FOR ADDED PROTECTION
- CAN BE USED WITH A FALL ARREST HARNESS

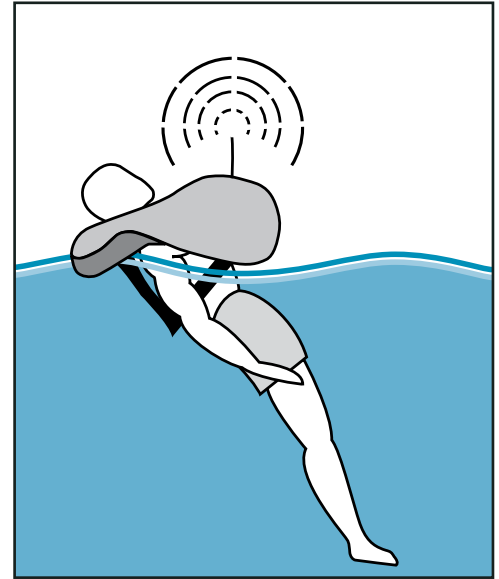

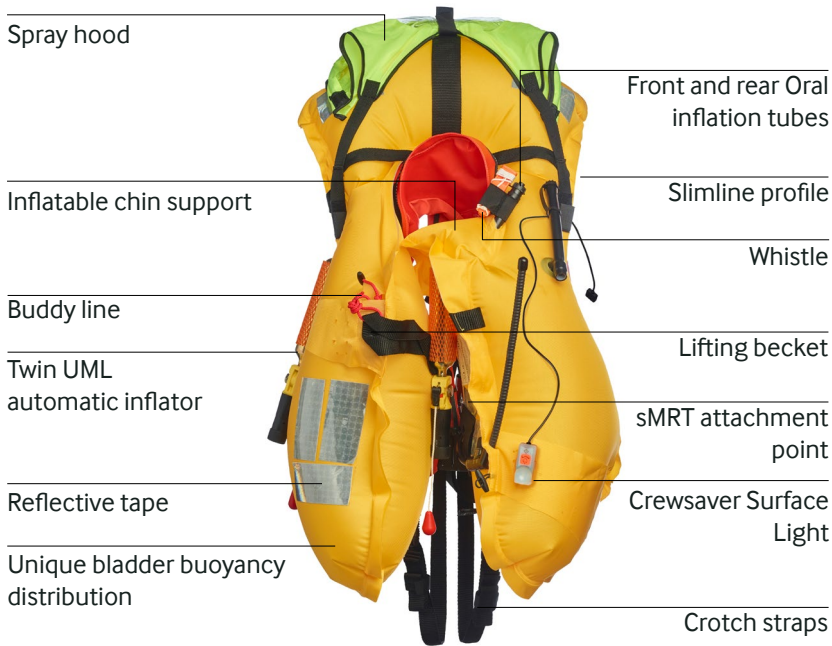

A SOLAS approved lifejacket designed with MRT to accommodate the Sea Marshall AU9 and sMRT AU10 PLBs

SEACREWSADER 290N 3D sMRT ↓

Should an emergency arise, and the wearer finds themselves in the water, they will discover that the sculpted bladder is designed to inflate quickly and reliably – even when heavy work gear and clothing is worn. The unique buoyancy distribution provides top-of-the-range turning properties to efficiently rotate the wearer to a face up position in the water - whilst further protecting the airway by increasing mouth freeboard and improving both body angle and face plane.

The sMRT PLB is encased in a positively buoyant neoprene pouch - allowing the main unit to float free from the lifejacket whilst staying securely attached via the lanyard. This allows the wearer to easily access the sMRT to operate as required.

The lifejacket's sculpted bladder combined with the placement of the sMRT positions the PLB's antenna for optimum performance.

TECHNICAL DATA

Newtons	290N
Type	Lifejacket
Flotation	Inflatable
Chambers	Twin
Cover	Wipe Clean
Approval	SOLAS

APPROVALS

IMO Resolution MSC.81 (70), Part 1 as amended
