

TORRENT Edge Pad**MR85****Heavy duty edge pad rope protector**

Features:

- Heavy duty, triple layer construction
- Captivates rope while allowing visibility
- Includes attachment cords

Outer canvas layers resist rope friction.
Inner fibre layers resist abrasion and add thickness to effectively blunt sharp edges.

The curved edges of the Torrent allow it to captivate the rope whilst still allowing full visibility. Connecting 2 corners together with a cord or karabiner holds the rope inside but can be fastened and unfastened quickly so that the protector can easily be passed.

If rope-on-rope friction is an issue in a particular application an additional wrap around protector can be used on one of the ropes.

Fitted with 2 attachment cords for securing to the structure, the other eyelets can be used as additional securing points if required. The extra large eyelets can be clipped directly with karabiners if required.
