

RP280 Rope Wrench

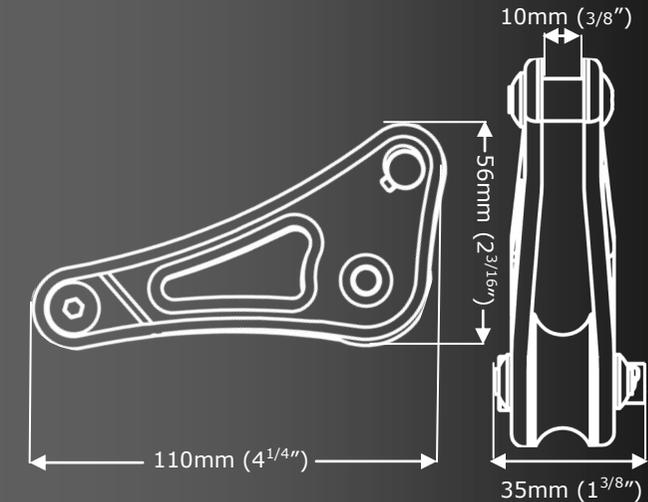

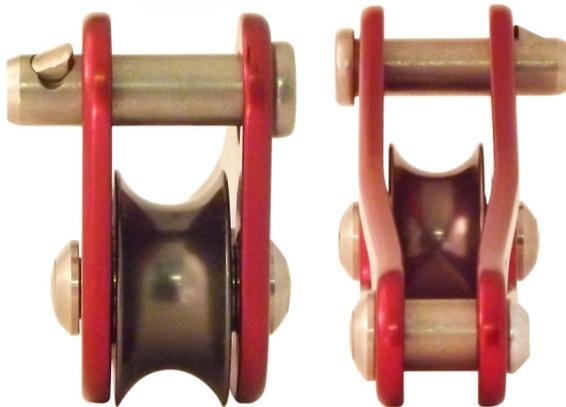

Data Sheet

climb. work. rescue.

SOLUTIONS IN METAL

The Zk-2 model has rounded side plates and pins for minimal rope wear. It is fitted with a pulley wheel, to support the rope radius and minimise rope compression.

The Singing Tree Rope Wrench (STRW) creates a "bend" above the climbers hitch on the single line which, in addition of the tether to connect to the device, creates a "contained doubled rope system" on the single line.

The STRW allows so many more options for safe movement in the tree whilst using a single rope.
