Data sheet

INTERLAYER

INTERLAYER provides an invisible layer of protection for helmets - which makes it the perfect accessory for any INCEPTOR GRX fan who wants to personalize their helmet with stickers or labels.

The specially tested film doesn't have any chemical influence on the helmet shell's high-quality plastic material, so it protects the user against any material damage that could occur unintentionally.

The see-through sticker lets the user apply any type of individual labels to the helmet or use felt-tip pens to write on it. INTERLAYER is used as the first layer directly on the helmet before other stickers, writing, or drawings are added. As a result, safety and material resistance can be guaranteed in full during the product life of the INCEPTOR GRX.

- Serves as base for individual markings on the helmet
- Invisible and can be trimmed to size
- No impact on the helmet's protective function
